INTERNAL · NOT FOR CLIENT

Tier rationale
Ūnika Swim.

Growth + Studio at launch.
Custom-order ops + sensitive-fit segregation are the differentiators.

Audience · Internal only
Use · Reference for the conversation; never share with the brand
Status · Draft for discussion · sensitive-fit data segregation is non-negotiable

THE RECOMMENDATION

Growth ($3,500) + Studio ($750) = $4,250/mo at launch.

A custom-maker brand whose Atelier work is the product. The Studio is operationally heavy — custom-order tracker + appointment scheduler + fabric library + sensitive-fit segregation — but the margin holds at typical apparel levels. Walk-away signals are sharp around sensitive-fit handling.

DIFFERENT FROM THE OTHER CLIENTS

What's specific to Ūnika.

1. Custom-order tracker is the killer feature

Made-to-order, 4–6 weeks, six stages, real photos from the boutique. No other client has this scale of order-tracking complexity.

2. Sensitive-fit data segregation is non-negotiable

Mastectomy / ostomy / scar data lives in a separate audit-logged store. Specialist-only access. Never trains AI. Privacy posture stricter than apparel clients.

3. Trilingual at launch

EN / PT / ES from day one — Brazilian heritage + Latina audience. Translation cost slightly higher than bilingual clients.

4. Appointment scheduling matters

The boutique is at 101 Yorkville. Appointment scheduler with specialist matching (cup size, sensitive-fit needs) is core to the workflow. Not just a calendar.

WHY STARTER IS DISQUALIFIED

Same as other brands — single-platform, 5-screen, no AI.

STARTER CONSTRAINT	ŪNIKA REALITY
Single platform	Both — Toronto/CA mixed, Brazilian customers heavy iOS, US heavy iOS.
5 screens	Phase 1 is ~18 screens including the Atelier flow alone.
No AI	Atelier chat (trilingual) is core to the value AND custom-design accuracy.
24h email support	Sensitive-fit conversations need same-day response — slow response erodes trust.

STUDIO ADD-ON ($750/mo)

Mandatory and operationally heavier than apparel clients.

Custom-order tracker + fabric library + appointment scheduler + sensitive-fit segregated store + trilingual content all live here. Margin holds because Phase 1 customer base is small (~3K MAU expected).

COMPONENT	REAL COST / MO	MARGIN NOTES
Web hosting	$25–50	Compliance review tooling adds slight load
DB delta (custom orders, fabric inventory, segregated sensitive-fit)	$15–35	Higher than apparel — sensitive-fit segregation requires separate audit-logged DB
Object storage (custom-order photos at 6 stages, fabric swatches)	$15–35	Photo-heavy
Editorial AI (atelier chat, translations EN/PT/ES, fabric descriptions)	$30–80	Trilingual = 1.5× bilingual cost
Email + push (appointment reminders, order updates, custom-stage photos)	$15–30	Custom orders generate more tx email per customer
Auth (~12 internal seats — Betsy, specialists, Yorkville staff)	$0	Free tier on Supabase / Clerk
Subtotal infra + AI	**~$100–230**	**Between apparel (~$140) and Moon Juice (~$260)**

MARGIN AT $750/MO

Real cost ~$165/mo (mid-band). Includes ~5 maintenance hrs/mo. Gross margin ~70%. Healthy for a custom-maker brand.

STUDIO ONE-TIME BUILD COST

Roughly **$40–55K** on top of the mobile build. 9 modules in Phase 1: auth + custom-order tracker (most complex single module — 6-stage workflow with photo upload) + fabric library editor + appointment scheduler with specialist matching + concierge inbox with sensitive-fit access controls

+ repair / restoration workflow + trilingual translation pipeline + Sun-tier admin + analytics. Higher than apparel due to custom-order tracker + sensitive-fit segregation.

YEAR-2 UPGRADE TRIGGERS

Move them to Enterprise the moment any one fires.

TRIGGER	WHY IT FORCES THE UPGRADE
AR custom-design preview	Body silhouette AR needs native Swift / Kotlin modules.
Wholesale / boutique B2B portal	SSO + audit logging + RLS for partner boutiques.
EU / Brazilian data residency	GDPR + LGPD as European/Brazilian volume becomes material.
In-store iPad POS integration	Boutique team co-designs with customer; needs hardened device management.
24/7 1h SLA	Retail / boutique partner makes uptime contractual.

LIKELIHOOD BY MONTH 12

AR: **medium**. Wholesale: **medium-high** — boutique conversations likely. Brazilian data residency: **medium** — depends on Brazil expansion velocity. Realistic 12–18 months to Enterprise.

DEAL-MAKING TACTICS

How to anchor and protect the conversation.

- **Lead with the custom-order tracker demo.** Show the 6-stage workflow with photo upload. Differentiates from competitors who pitch generic e-commerce apps.
- **Sensitive-fit segregation is your trust builder.** Walk Betsy through the data flow: stored separately, audit-logged, never trains AI, specialist-only. This is a feature she'll defend internally.
- **Pre-negotiate the Enterprise upgrade path.** 12–18 month timeline.
- **AI overage clause.** Trilingual Atelier chat is non-trivial cost.
- **Brazilian/Latina market expansion is the upside.** Frame the trilingual launch as growth foundation, not just nice-to-have.

WHAT WE DON'T SAY OUT LOUD

Internal-only notes — sharper than apparel clients.

REPUTATION RISK TO MANAGE

The brand's reputation is built on seeing customers no one else sees. One AI prompt that uses sensitive-fit data in a marketing context is a viral story and a brand-killer. Insist on the segregation architecture in production from day one. Build in audit logging to flag any AI prompt touching the segregated store.

MARGIN TARGET — COMBINED

Growth tier infra+AI cost at expected MAU (~3K active in Year 1) is ~$700–1,000/mo. Plus Studio at ~$165/mo. At combined $4,250/mo we're at 70–75% gross before maintenance dev. Healthy.

UPSELL SEQUENCING

Don't propose AR + in-store iPad at the same time as Phase 1. Land Growth + Studio, deliver custom-order tracker + sensitive-fit segregation flawlessly, *then* propose AR as the trigger for Enterprise.

WALK-AWAY SIGNALS

(1) Brand wants sensitive-fit data accessible to marketing AI. (2) Brand wants "summer body" or "slimming" copy. (3) Brand resists the trilingual launch as too expensive. Any one = walk. The brand's reputation depends on these three lines being held.

RECOMMENDED ASK

Growth ($3,500) + Studio ($750) = $4,250/mo for Year 1. Pre-negotiated Enterprise upgrade. AI overage at cost +20%. Sensitive-fit segregation contract clause (audit-logged, specialist-only, never trains AI). $40–55K Studio build inside Phase 1.

Right tier for a custom-maker brand whose work is personal. The Studio architecture is what makes the brand's deepest value — sensitive-fit work — actually scalable.
