

INTERNAL · NOT FOR CLIENT

Tier rationale Pineda Covalín.

Why we recommend Growth — and exactly when
to upgrade them to Enterprise.

Audience · Internal only

Use · Reference for the conversation; never share with the brand

Status · Draft for discussion

THE RECOMMENDATION

Growth at launch (\$3,500/mo). Enterprise when one of four triggers fires.

A luxury, multi-region brand with serious AI ambitions cannot live on Starter. But Enterprise on day one would over-charge and under-utilise. Growth is the right shape — for now.

WHY STARTER IS DISQUALIFIED

Single-platform / 5-screen / no-AI is incompatible with the proposition.

STARTER CONSTRAINT	PINEDA COVALÍN REALITY
Single platform (iOS or Android)	Tourists are mixed Android (heavy in MX) + iOS (heavy in US/JP). Both required.
5 screens	Locked Phase 1 scope is ~18 screens.
No AI	Cultural docent, multilingual translation, gift recommender are core to the value proposition.
24h email support	Museum and luxury-hotel partners expect same-day response.

If the brand pushes for Starter on price, walk away from the deal. We'd lose money supporting them and they'd hate the result.

The features map exactly to what the proposal needs.

GROWTH FEATURE	WHAT IT DELIVERS FOR PINEDA COVALÍN
Both stores via React Native + Expo	Single codebase, OTA updates — right cadence for cultural-calendar drops.
Claude Sonnet + Haiku AI	Sonnet powers the cultural docent in 6 languages; Haiku batches Atelier summaries and translation.
RevenueCat (StoreKit 2 + Google Play Billing)	Future-proofs digital-certificate or VIP-membership monetisation.
Sign in with Apple + Google	Friction to a luxury-brand login is real. Tourists won't fill forms.
ASO quarterly	Tourist discovery — "Mexico souvenir," "silk scarves Mexico City," "Frida Kahlo gift."
2 releases / month	Cultural-calendar drops demand a regular cadence.
Shared Slack, 4h response	Right level for a luxury brand at launch — not over-engineered.

Three reasons to hold the upgrade for now.

1. White-label / multi-tenant is unused

Enterprise's headline differentiator. Pineda Covalín is one brand; multi-tenant adds zero value. Paying for it now is a tell that we over-sold.

2. Native modules aren't needed yet

Phase 1 has no AR. React Native delivers everything in scope. Native Swift/Kotlin matters when AR scarf try-on goes live in Phase 2 — not earlier.

3. SLA mismatched to launch reality

1h response 24/7 (Enterprise) is for live-revenue partners. At launch the app's downtime doesn't directly stop a sale; the web store carries that. Right level today is 4h.

4. Data residency not yet contractual

Multi-region launch is EN/ES first. EU/Asia residency rules become contractual when traffic from those regions becomes serious — give it 12 months.

YEAR-2 UPGRADE TRIGGERS

Move them to Enterprise the moment any one fires.

TRIGGER	WHY IT FORCES THE UPGRADE
AR scarf try-on goes live	Cloth-drape simulation needs native Swift/SwiftUI + Kotlin/Compose modules — Enterprise-only.
Corporate / diplomatic gifting portal	SSO, audit logging, RLS hardening — Enterprise-only — required for B2B.
EU / Asia data-residency clause	GDPR + APAC localisation rules. Enterprise's region-locked residency is the only compliant option.
24/7 1h SLA contractually required	When a museum partner or luxury-hotel chain makes uptime contractual, the SLA is no longer optional. Their airport stores are genuinely 24/7 globally.

LIKELIHOOD BY MONTH 12

AR try-on: **high** — they'll want it for the AW collection drop. Corporate portal: **medium** — depends on whether the diplomatic-gifting business is being modernised. EU residency: **medium** — driven by Galleries Lafayette and any EU growth. SLA: **low** in year 1 unless a partner forces it.

How to anchor and protect the conversation.

- **Lead with Growth, never Starter.** If Growth feels expensive, expand the build inclusion (e.g. discovery sprint baked in) rather than dropping a tier. Starter quality would damage our reputation with a luxury brand.
- **Pre-negotiate the Enterprise upgrade path.** Lock the upgrade fee at no penalty in the Year 1 contract — easier to land Growth today if Enterprise tomorrow is frictionless.
- **AI overage clause is non-negotiable.** Pineda Covalín's docent will be heavily used in 6 languages. A viral Frida exhibit could 10× usage in a weekend. Cap our exposure: usage above 100K LLM calls/month at cost +20%.
- **Pre-pay discovery, not the build.** \$8–12K discovery sprint in week 1 is fine. Resist any pressure to pre-quote the build before discovery is done.
- **Cultural-content review is brand-side.** Make the customer responsible for approving every customer-facing string of cultural content. Protects us from a translation or motif-attribution mistake.

Internal-only notes.

REPUTATION RISK TO MANAGE

This brand's value is authentic Mexican cultural craft. A single AI translation error involving Wixárika or Día de Muertos terminology could become a real story. Insist on human curator review for every cultural string. Budget for a Spanish-speaking QA in our team — not the brand's.

MARGIN TARGET

Growth tier infra+AI cost at expected luxury MAU (~5K active in Year 1) is roughly \$700–1,200/mo. At \$3,500/mo we're at 65–80% gross before our maintenance dev. Healthy. Watch the AI line.

UPSELL SEQUENCING

Don't propose Phase 2 features at the same time as the Phase 1 contract. Land Growth, deliver Phase 1 well, *then* propose AR try-on as the trigger for Enterprise. Earn the upgrade.

WALK-AWAY SIGNALS

If they push back on AI overage clause + Enterprise upgrade pricing simultaneously, that's a sign they want flat fixed-fee pricing forever. We can't profitably support a multi-region luxury brand that way. Be willing to walk.

RECOMMENDED ASK

Growth (\$3,500/mo) for Year 1 + pre-negotiated Enterprise upgrade. AI overage at cost +20%. Brand-side cultural-content approval.

Right tier for the launch. Right path for the success scenario. Right protections against the small set of things that could go wrong.
